Observation

Calculated column:

Step -1

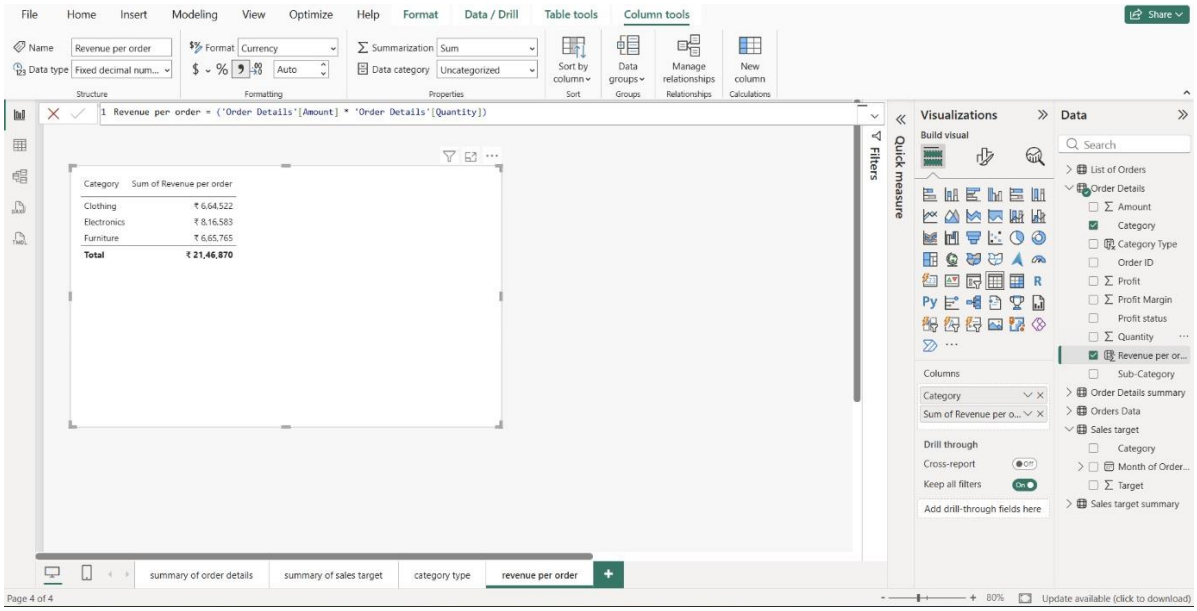

Created a calculated column named Category Type in the Order Details table by combining the Category and Sub-Category columns

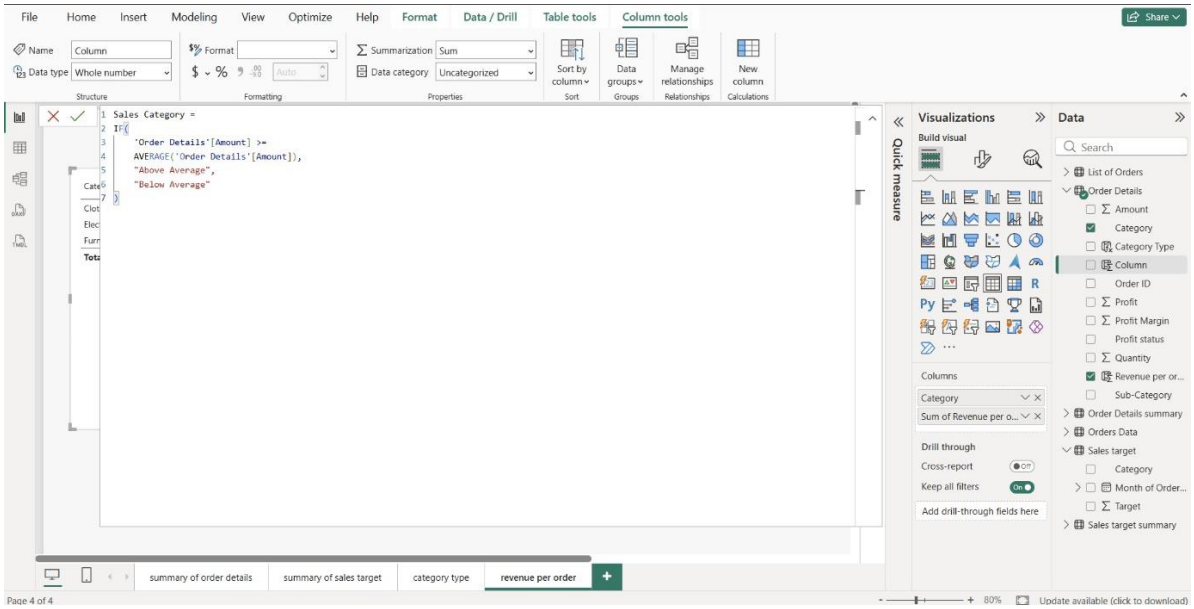

Step - 2

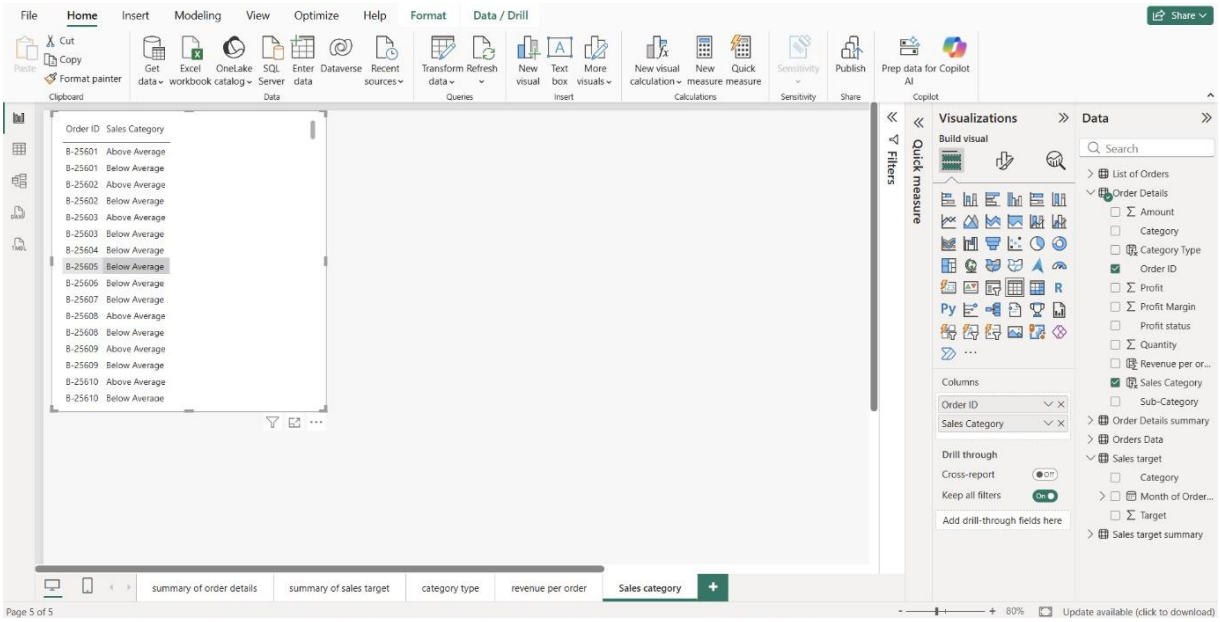

Created a calculated column named Revenue per Order in the Order Details table using the following formula

Step- 3

created a calculated column named ‘Sales Category’ in the Order Details table that categorizes each order as 'Above Average' or 'Below Average' based on the Amount value.

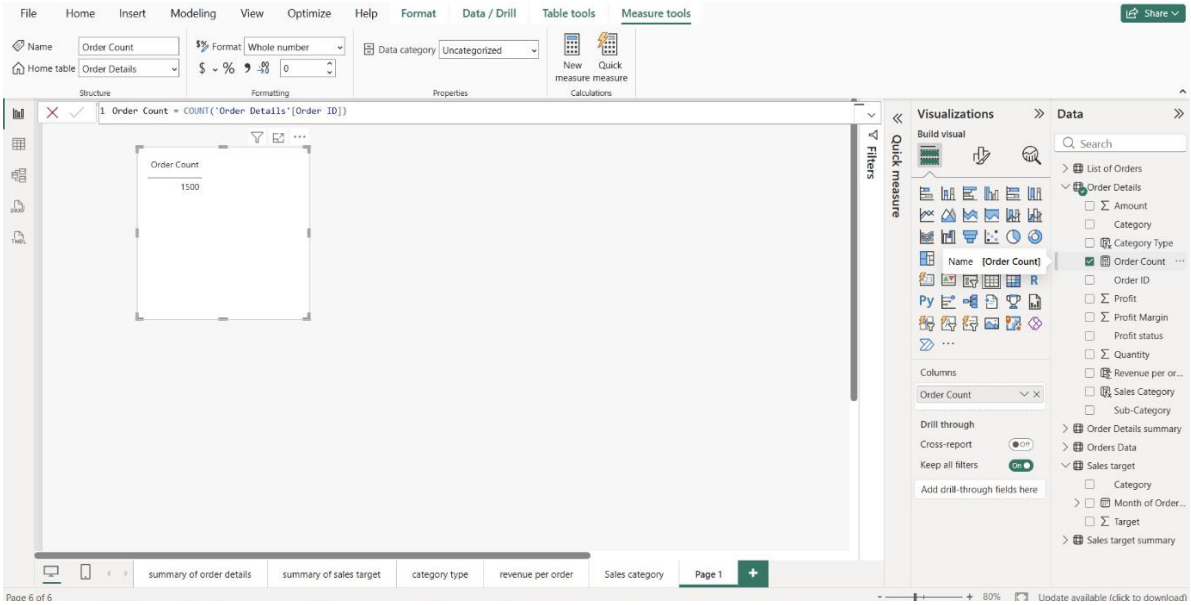

Calculated measure:

Step - 4

Calculate Order Count:

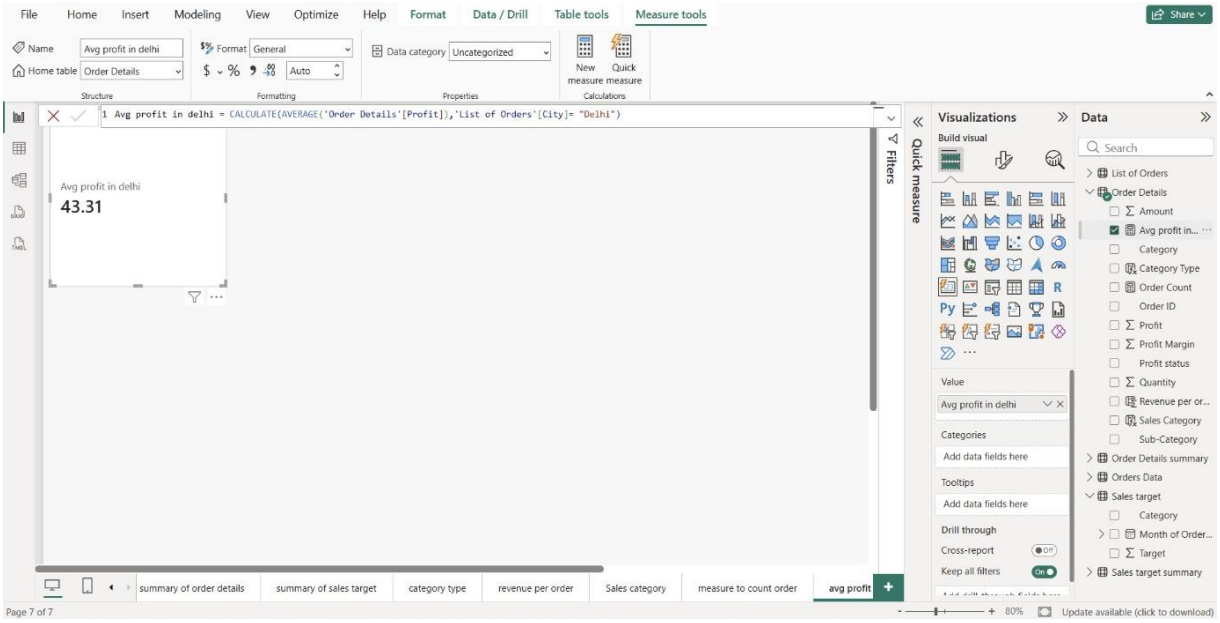

Created a measure to calculate the total order count in the Order Details table.

Step- 5

Calculate Average Profit in Delhi

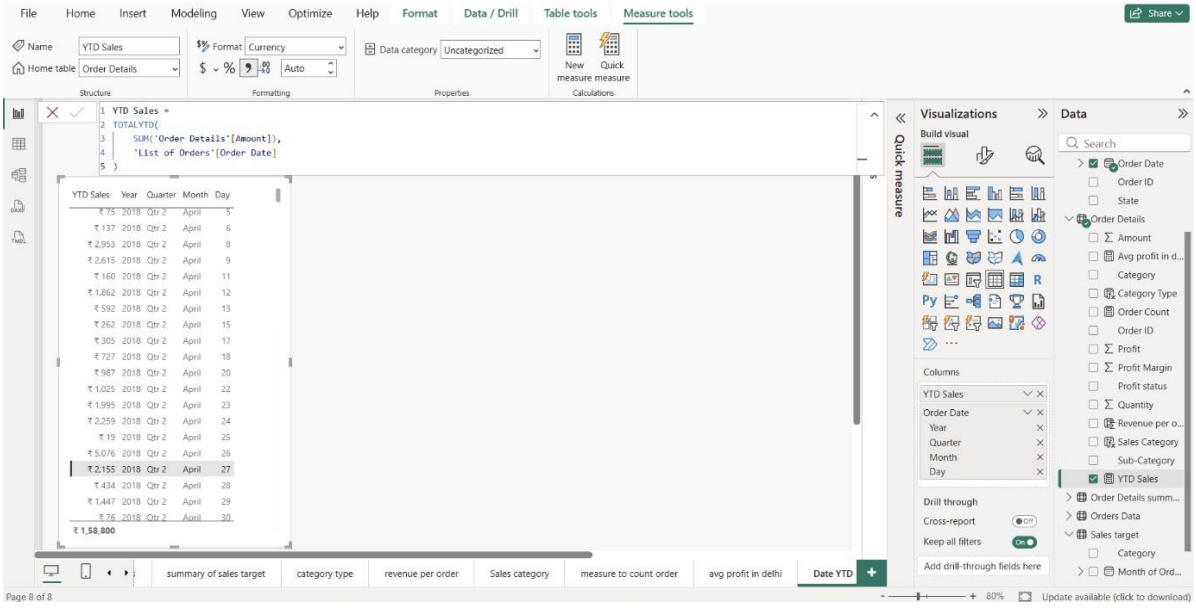

Created a measure to calculate the average profit for orders placed in Delhi. The formula and result are shown in the screenshot.

Step- 6

Calculate Year-to-Date (YTD) Sales

Created a measure to calculate the total sales amount accumulated from the earliest order date up to each order date.

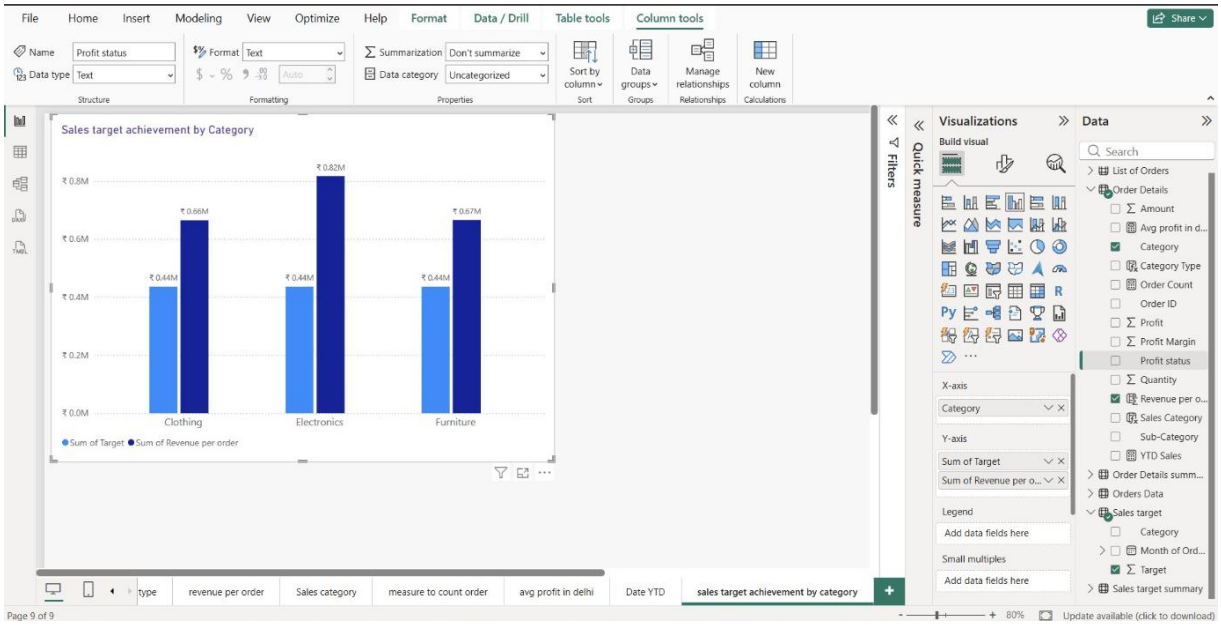

Data Visualization

Step- 7

Sales Target Achievement by Category

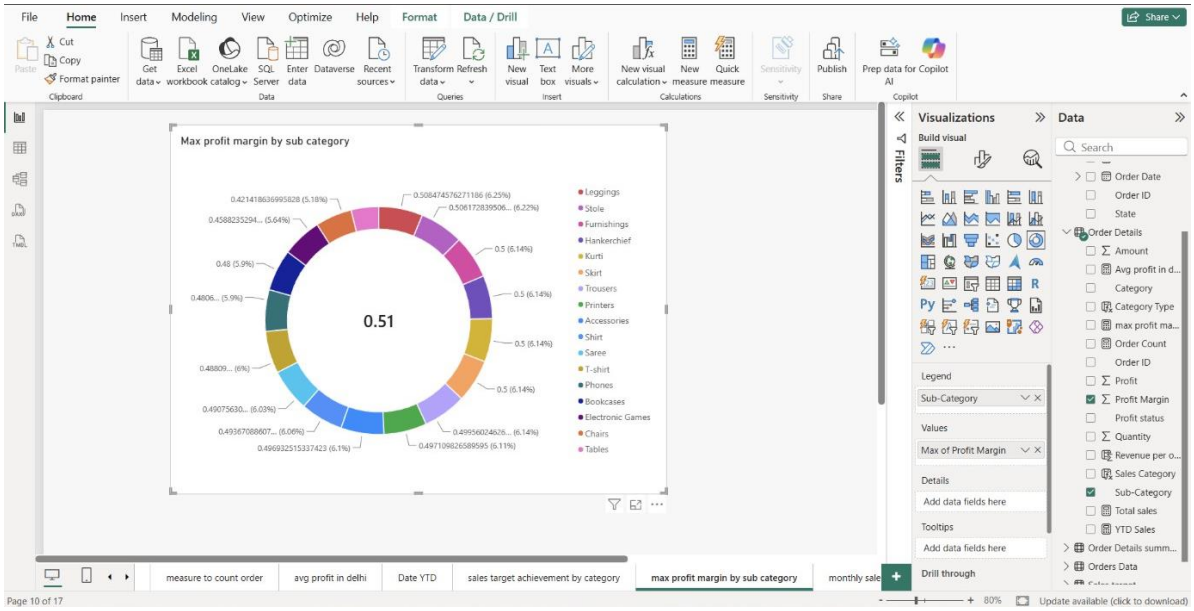

Created a clustered column chart to compare actual sales with sales targets across categories.

Step- 8

Max Profit Margin by Sub-Category

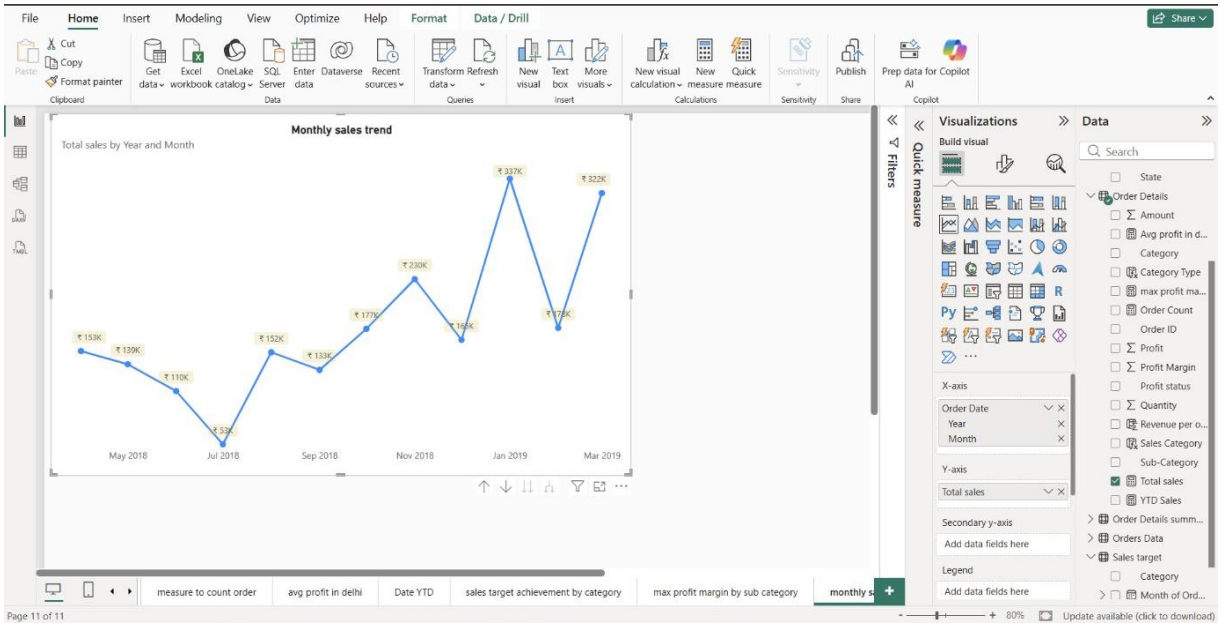

Created a donut chart to show the profit margin as per sub category wise.

Step- 9

Monthly Sales Trend

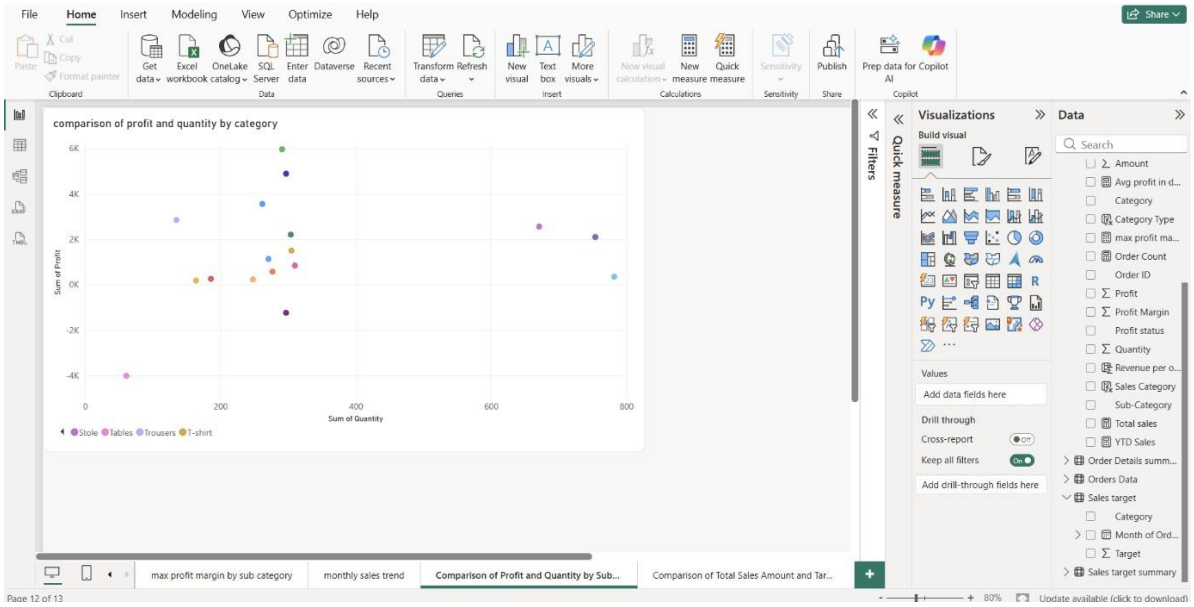

Created a line chart to display the monthly sales trend over time.

Step- 10

Comparison of Profit and Quantity by Sub-Category

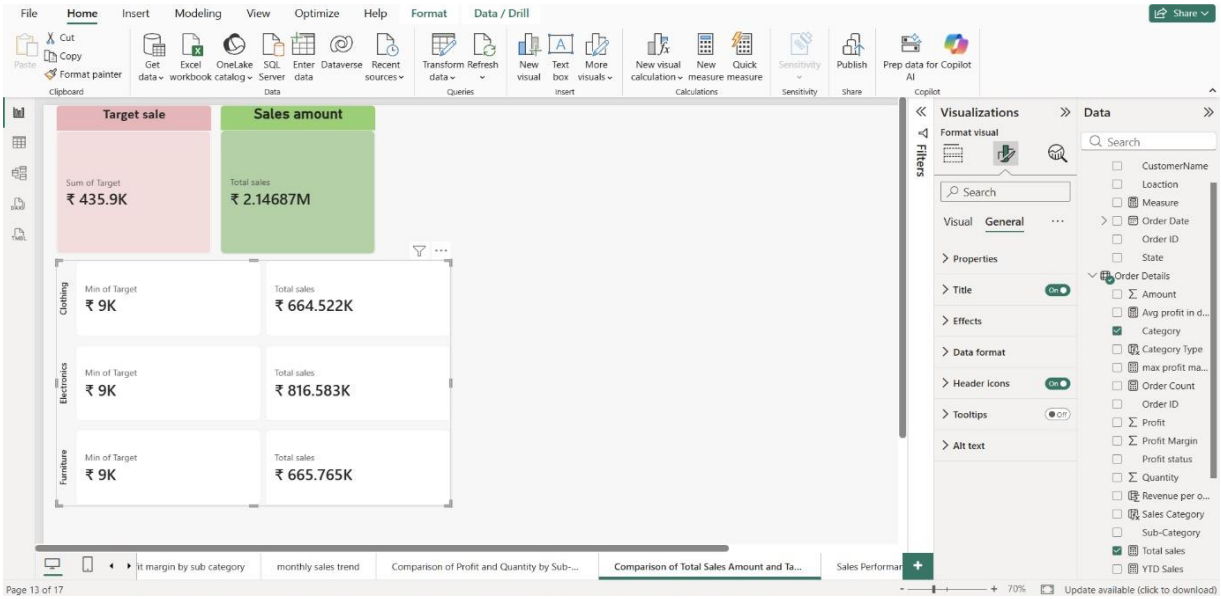

Created a scatter chart to compare Profit and Quantity across different sub-categories. This visualization helps identify the relationship between the quantity sold and the profit generated by each sub-category.

Step- 11

Comparison of Total Sales Amount and Target

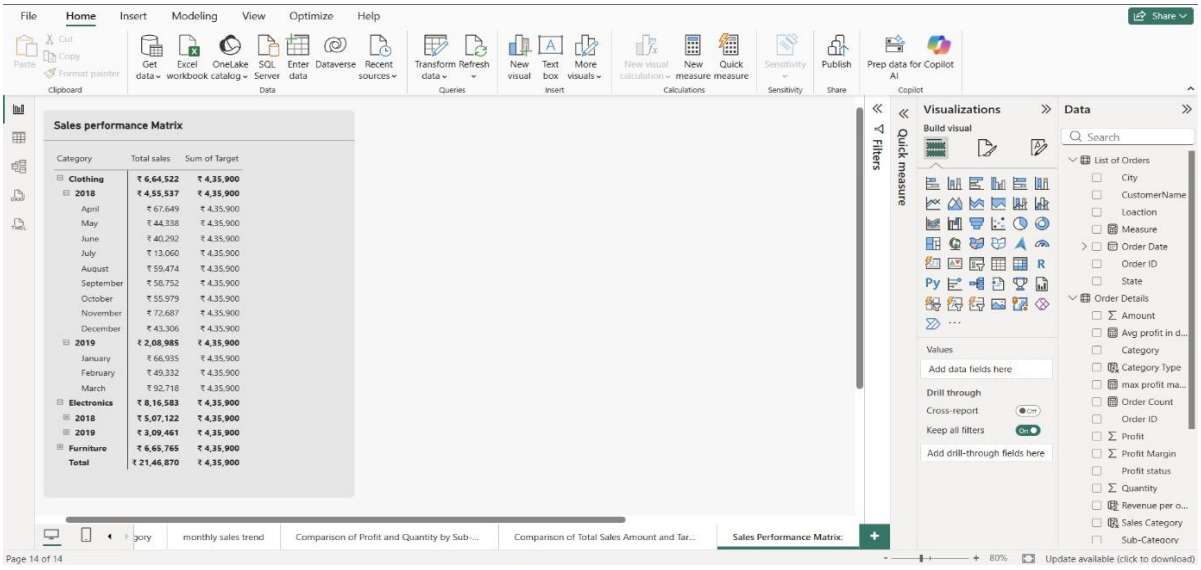

Created cards to display the total Sales Amount and total Sales Target for quick comparison. Also created a multi-row card to display the minimum Target for each category and achieve target per category**.**

Step- 12

Sales Performance Matrix

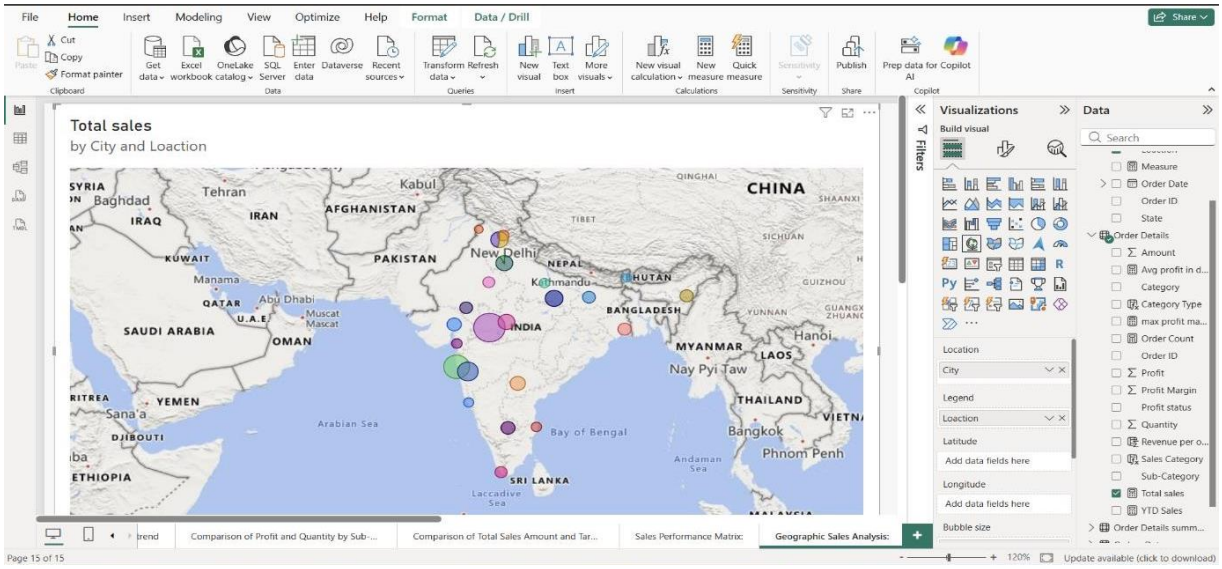

Created a matrix to compare actual Sales Amount with Sales Target across different Categories and Months. This helps analyze sales performance and identify categories or months where sales are above or below the target.

Step- 13

Geographic Sales Analysis:

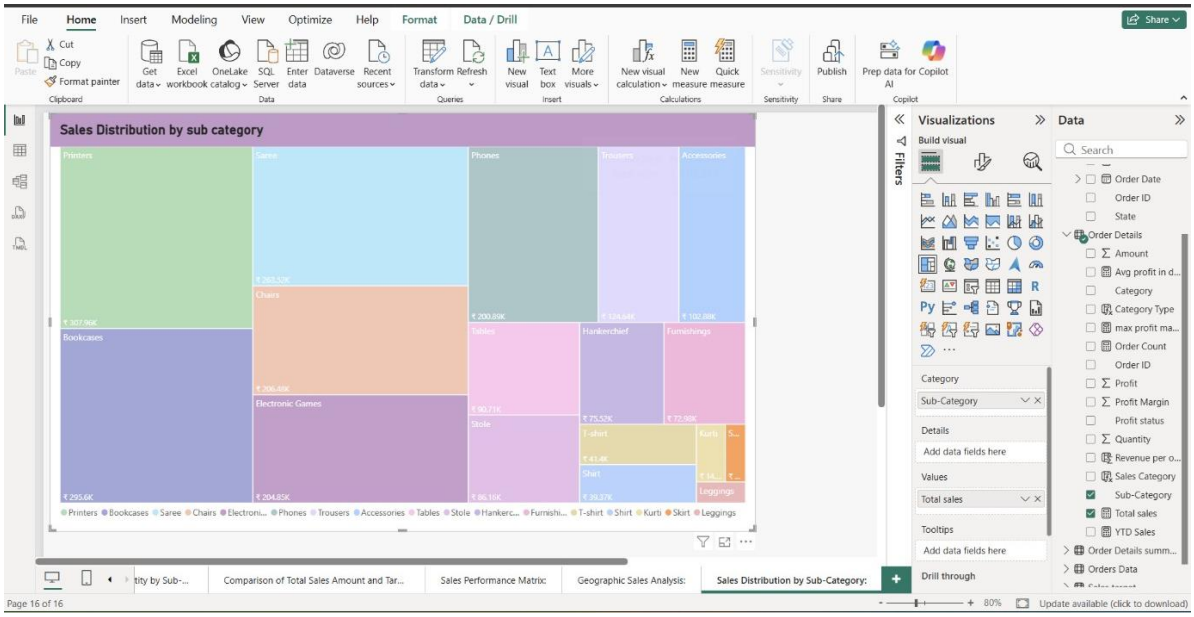

Created a map visualization to display total sales by city and analyze geographical sales patterns.

Step- 14

Sales Distribution by Sub-Category

Created a treemap to represent the distribution of sales across sub-categories.

Step- 15

Order Count Analysis by State

Created a funnel chart to visualize the order count across different States. This helps compare the distribution of orders among states.
